

Nifty 50 Intraday Desk Report - 2026-06-01

Nifty 50 Intraday Desk Report

Analysis Date: 2026-06-01

Mode: LIVE

Generated At: 2026-06-01 09:20 IST

NSE Status: **OPEN**. NSE's 2026 trading-holiday list for F&O does not list June 1, 2026 as a trading holiday; the nearby listed holidays are May 28, 2026 for Bakri Id and June 26, 2026 for Muharram.

([nsearchives.nseindia.com](https://nsearchives.nseindia.com/content/circulars/FAOP71777.pdf))(<https://nsearchives.nseindia.com/content/circulars/FAOP71777.pdf>)

Reference Prices:

Previous Close: **23,547.75**

Today's Open: **23,654.50**

Expected Day Range: **23,293 - 24,016**

Expected Range Confidence: **67%**

Actionable Desk Range: **23,480 - 23,880**

Actionable Range Confidence: **64%**

Close vs Open Direction:

Expected Bias: **Near open / conditional range**

Direction Confidence: **54%**

Overall Report Confidence: **62%**

Data boundary note: The current-day open/reference price was used; current-day post-09:20 high, low, close, and intraday path were not used for the morning view. Previous Nifty OHLC used for CPR was May 29, 2026: open 23,902.15, high 24,002.80, low 23,484.75, close 23,547.75. ([kotakneo.com](https://www.kotakneo.com/indices/indian-indices/nifty-50))(<https://www.kotakneo.com/indices/indian-indices/nifty-50>)

1. Market Summary

Nifty opened with a **moderate gap-up of about 0.45%** versus the previous close, but the open is **inside the wide CPR**, not above a confirmed breakout zone.

India VIX previous close/reference is **16.19**, placing volatility in the elevated-but-not-panic band. ([business-standard.com](https://www.business-standard.com/markets/capital-market-news/sensex-settles-1-092-pts-lower-nifty-ends-below-23-550-mark-vix-soars-8-02-126052901024_1.html))

Global cues are supportive from GIFT Nifty, Wall Street, and Asia, but Brent near the USD 93/bbl zone and heavy FII selling keep the setup fragile. ([moneycontrol.com](https://www.moneycontrol.com/news/business/markets/gift-nifty-up-signals-mildly-positive-start-for-sensex-nifty-despite-oil-rebound-ai-rally-lifts-asian-markets-13937016.html))

The base behaviour favours **range / mean-reversion first**, with trend confirmation only above R1 or below the previous day low.

Main directional risk is a failed gap-up if price loses 23,613 / 23,550 with VIX firming.

Section Confidence: **64%**

2. Key Levels

| Level Type | Level | Interpretation | Confidence |

|---|---:|---|---:|

| Strong Resistance | **24,000 - 24,016** | Previous day high / round-number supply / VIX upper-band confluence | 70% |

| Immediate Resistance | **23,744 - 23,872** | CPR upper band to R1; acceptance above this zone needed for bullish follow-through | 68% |

| Strong Support | **23,354 - 23,485** | S1 to previous day low; breakdown below this opens lower volatility band | 70% |

| Immediate Support | **23,613 - 23,550** | CPR lower band and previous close zone; first intraday defence | 66% |

| Pivot | **23,678.43** | Intraday balance magnet; price above/below this decides first bias | 72% |

| CPR Zone (TC to BC) | **23,613.09 - 23,743.78** | Wide CPR of **130.68 pts**; range/mean-reversion tendency unless accepted outside | 72% |

| Previous Day High | **24,002.80** | Major supply and breakout validation level | 74% |

| Previous Day Low | **23,484.75** | Major support and bearish trigger | 74% |

| Previous Day Close | **23,547.75** | Gap reference and sentiment anchor | 78% |

| Breakout Level | **23,872 / 23,900** | R1 plus round-number acceptance; above this, 24,000 can be tested | 63% |

| Breakdown Level | **23,485 / 23,450** | Prior low breach; below this, S1 and VIX lower band become active | 63% |

| Expected Intraday Range | **23,293 - 24,016** | VIX statistical envelope; not a direct target | 67% |

| R1 | **23,872.12** | First upside pivot resistance | 72% |

| R2 | **24,196.48** | Extended upside resistance; unlikely unless breakout expands | 65% |

| S1 | **23,354.07** | First downside pivot support | 72% |

| S2 | **23,160.38** | Extended downside support; only on risk-off expansion | 63% |

Section Confidence: **70%**

3. Probability Model

From current day open of **23,654.50**:

Upside Probability: **31%**

Downside Probability: **29%**

Sideways Probability: **40%**

Total: **100%**

Section Confidence: **58%**

Leading scenario: **Sideways / mean-reversion with conditional breakout risk.**

The open is inside a wide CPR, which reduces clean directional confidence.

Positive global cues and a mild gap-up support dip-buying, but heavy FII outflow and elevated crude cap upside conviction.

A sustained move above **23,872-23,900** shifts the day toward bullish trend; failure below **23,485** shifts it bearish.

Until then, the desk should treat **23,500-23,880** as the main operating zone.

4. Factor Scoring Table

| Factor | Observation | Bias | Weight | Impact | Confidence |

|---|---|---|---|---|---|

| Price Action & Gap Context | Moderate gap-up of ~0.45%, but open is inside wide CPR and below/near pivot | Neutral to mildly positive | 35% | Range first; breakout only above R1 | 68% |

| India VIX / Volatility | VIX reference near 16.19; elevated, not extreme | Volatile / two-way | 20% | Supports wider stops; avoid assuming quiet expiry decay | 68% |

| Derivatives Logic | Live option-chain values not confirmed at 09:20; simulated call zones 23,800/24,000 and put zones 23,500/23,350 | Range with gamma risk | 20% | Writer defence likely near round strikes; sharp expansion if breached | 52% |

| Global & Macro Cues | GIFT Nifty mildly positive; US and Asia supportive, but Brent near USD 93 and West Asia risk remain concerns | Mixed but fragile | 15% | Supports opening bounce but caps confidence | 66% |

| Institutional Flow / Liquidity | FIIs sold ■21,105.86 cr; DIIs bought ■16,764.14 cr on May 29; net institutional pressure about -■4,341.72 cr | Bearish but DII-cushioned | 10% | Higher risk of sell-on-rise if price fails above CPR | 70% |

| Markov Regime Overlay | Large prior bearish candle + gap into CPR generally favours mixed/range transition unless early acceptance breaks | Calibration layer | Non-voting or bounded | Lowers directional confidence | 45% |

FII/DII flow and global cue inputs are from pre-market/public market updates available before or around the opening window. ([trendlyne.com](https://trendlyne.com/macro-data/fii-dii/latest/cash-pastmonth/30-May-2026/?utm_source=openai))

Section Confidence: **61%**

5. Scenario Mapping

Bullish Case (31%)

Price must sustain above: **23,744 first, then 23,872-23,900**

VIX behaviour: Should stay flat-to-lower below roughly **16.2-16.6**

Breakout confirmation: 5-minute acceptance above R1 with no immediate rejection back into CPR

Upside targets: **23,950, 24,000-24,016**, extended **24,196** only on strong breadth

Confidence: **55%**

Bearish Case (29%)

Price must fail below: **23,613**, then **23,547 / 23,485**

VIX behaviour: VIX rising above **16.6-17.0** while price trades below CPR

Breakdown confirmation: Sustained trade below previous day low with weak recovery attempts

Downside targets: **23,354, 23,293**, extended **23,160** only on risk-off acceleration

Confidence: **54%**

Sideways Case (40%)

Range to hold: **23,500 - 23,880**

Option writer defence zone: Simulated put defence near **23,500 / 23,400** and call defence near **23,800 / 24,000**

Confirming behaviour: Price oscillates around pivot **23,678**, VIX does not spike, failed breakouts reverse quickly

Mean reversion target: **23,650 - 23,700**

Confidence: **60%**

Section Confidence: **58%**

6. Assumptions Made

Missing Data Assumptions

- The report uses **23,654.50** as the current-day open/reference price; sources after 09:20 were used only to verify the open, not to use later intraday high/low/current movement. ([businessupturn.com])(<https://www.businessupturn.com/finance/stock-market/stock-market-opens-1-jun-2026/>))
- Current-day close, post-09:20 intraday path, and final high/low were not used.
- US 10-year yield was not given a direct scoring weight because a clean pre-09:20 value from a primary source was not available during this run.

Simulated Derivatives Assumptions

- Live option-chain OI/PCR/max-pain was not treated as confirmed.
- Simulated call-writing zones: **23,800, 24,000, 24,200**.
- Simulated put-writing zones: **23,500, 23,400, 23,350**.
- Simulated max-pain / gravity zone: **23,650-23,700**, nearest to open and pivot.
- Nifty weekly expiry context is treated as near-expiry because the visible weekly expiry is **02-Jun-2026**. ([topstockresearch.com])(https://www.topstockresearch.com/rt/Stock/NIFTY/FuturesAndOptions?utm_source=openai))

Macro Assumptions

- Global cue classification is **mixed but fragile**: US and Asian equities are supportive, but crude and West Asia headlines remain active risk factors. ([moneycontrol.com])(<https://www.moneycontrol.com/news/business/markets/gift-nifty-up-signals-mildly-positive-start-for-sensex-nifty-despite-oil-rebound-ai-rally-lifts-asian-markets-13937016.html>))
- Brent near **USD 93/bbl** and USD/INR near **95** are treated as India macro headwinds. ([financialexpress.com])(https://www.financialexpress.com/market/sensex-nifty-50-stock-market-today-live-updates-india-us-iran-isreal-war-asia-nikkei-gold-silver-rate-crude-oil-01june2026-4255919/?utm_source=openai))

Markov/Quant Assumptions

- Markov overlay is qualitative and non-voting because complete recent daily-state transition data was not fully source-verified in this run.
- The overlay reduces directional confidence due to the combination of a large prior bearish day, gap-up open, and wide CPR.

Section Confidence: **56%**

7. Invalidations / Risk Factors

| Risk Factor | Trigger | Consequence | Primary View Invalidated | Confidence |

|---|---|---|---|---|

| Price invalidation | Sustained acceptance above **23,872-23,900** | Range view shifts to bullish breakout | Sideways / sell-on-rise | 65% |

| Price invalidation | Sustained break below **23,485** | Range view shifts to bearish continuation | Sideways / buy-on-dip | 66% |

| Geopolitical/news risk | Crude spikes above **USD 95/bbl** or fresh West Asia escalation headline | INR/FII pressure; risk-off selling | Neutral/sideways | 61% |

| FII selling shock | Fresh basket selling after heavy May 29 outflow | Gap-up can fail; downside expands | Bullish rebound | 68% |

| VIX spike | India VIX above **17.0** with price below CPR | Option premiums expand; range selling becomes unsafe | Range-selling | 64% |

| Watch window | **09:20-10:15** opening acceptance; **13:30-14:45** institutional flow; **15:00+** expiry/squaring risk | Avoid stale bias; reassess levels | All static views | 70% |

Section Confidence: **64%**

8. Trader-Specific Desk Plan

Option Non-Directional Seller

- Suitable / avoid: **Suitable only after confirmation that price holds inside 23,500-23,880 and VIX is not rising. Avoid during fast breaks of CPR edges.**
- Preferred structure: SL-based intraday short strangle / short straddle only for experienced traders; defined-risk variants preferred for smaller accounts.
- Strike or range logic: Simulated range logic around **23,500 PE** and **23,900/24,000 CE**; avoid selling too close to spot before range confirmation.
- Entry condition: After 09:35-09:45 only if price rejects both CPR edges and trades back toward pivot.
- Stop/invalidation: Exit or cut tested side if spot sustains above **23,900** or below **23,485**; option-leg SL must account for slippage.
- Time window: Prefer **09:45-13:45**; reduce risk before late-session expiry positioning.
- Confidence: **54%**

Option Directional Seller

- Suitable / avoid: **Conditional only; avoid pre-emptive selling inside CPR before trigger.**
- Preferred side: Sell OTM calls on rejection from **23,744-23,872**; sell OTM puts only if price sustains above pivot and VIX cools.
- Strike logic: Bearish rejection: consider **23,900/24,000 CE** side; bullish acceptance: consider **23,400/23,500 PE** side.
- Entry condition: 5-minute rejection candle at R1/CPR upper band for call selling, or retest-hold above pivot for put selling.
- Stop/invalidation: For call sellers, invalidate above **23,900** acceptance; for put sellers, invalidate below **23,550 / 23,485**.
- Time window: **09:40-12:00** for clean entries; be selective after 14:00.
- Confidence: **52%**

Option Buyer

- Suitable / avoid: **Suitable only on breakout/breakdown; avoid buying premium in pivot chop.**
- Calls or puts: Calls only above **23,872-23,900**; puts only below **23,485**.
- Entry condition: Breakout/breakdown plus retest or strong momentum candle with VIX support.
- Stop/invalidation: Spot-based SL around **35-55 points** or back inside the broken level; do not average losing options.
- Target logic: Calls: **23,950, 24,000-24,016**. Puts: **23,354, 23,293**.
- Time window: Best windows are **09:25-10:45** and post-lunch only if a fresh range break occurs.
- Confidence: **50%**

Future Intraday Trader

- Suitable / avoid: **Suitable for disciplined level traders; avoid midpoint trades inside 23,613-23,744.**
- Entry zone: Long only above **23,744 / 23,872** acceptance; short only below **23,613 / 23,485** failure.
- Stop: Long SL below reclaimed level or **45-60 points**; short SL above failed support or **45-60 points**.
- Targets: Long: **23,872, 23,950, 24,000**. Short: **23,550, 23,485, 23,354**.
- Timing: Wait for first 5-15 minute structure; avoid chasing the first candle.
- Confidence: **57%**

Section Confidence: **54%**

9. Trading Desk Interpretation

Classification: **Range-selling day.**

This is a **range-selling day with conditional breakout-trend guardrails**, not a clean buy-on-dip or sell-on-rise day at the open. The desk should treat **23,500-23,880** as the primary operating range, turn bullish only above **23,872-23,900**, and turn bearish only below **23,485**.

Bottom line: **Stay neutral while Nifty trades inside CPR/range; act only on acceptance outside the defined levels, because wide CPR plus elevated VIX can punish early directional trades.**

Section Confidence: **61%**
