

Nifty 50 Intraday Desk Report - 2026-05-29

Nifty 50 Intraday Desk Report

Analysis Date: 2026-05-29

Mode: LIVE

Generated At: 2026-05-29 09:20 IST

NSE Status: OPEN — May 28, 2026 was the Bakri Id trading holiday; trading resumed on Friday, May 29, 2026. ([nseindia.com])(https://www.nseindia.com/resources/exchange-communication-holidays/?utm_source=openai)

Reference Prices:

Previous Close: 23,907.15

Today's Open: 23,902.15

Expected Day Range: 23,564 - 24,241

Expected Range Confidence: 63%

Actionable Desk Range: 23,800 - 24,040

Actionable Range Confidence: 70%

Close vs Open Direction:

Expected Bias: Near open, with conditional upside only above 23,920 / 23,940

Direction Confidence: 54%

Overall Report Confidence: 68%

Reference note: The 09:15 open was 23,902.15 versus previous close 23,907.15, a flat-to-marginal negative open of about -0.02%. Only the analysis-date open/reference price is used; no later intraday high, low, close, or path is used for the morning view. ([upstox.com])(<https://upstox.com/news/market-news/stocks/sensex-rises-200-pts-nifty-50-opens-flat-at-23-902-amid-low-oil-prices-it-stocks-like-wipro-infosys-among-gainers/article-194464/>)

1. Market Summary

Nifty opened almost flat after the May 28 holiday and is positioned just below a very narrow CPR zone of 23,911.68 - 23,920.73.

India VIX previous close at 14.98 is in the normal regime, supporting range-to-conditional-breakout behaviour rather than panic volatility. ([jp.investing.com])(https://jp.investing.com/indices/india-vix-historical-data?utm_source=openai)

Global cues are mixed but constructive: US indices closed at records, Asian markets were positive, and Brent cooled near \$92, but the US-Iran deal was not formally final at the morning boundary.

([apnews.com])(https://apnews.com/article/69f6b6c8b2bf904c69087af415812d4c?utm_source=openai)

The main intraday battlefield is 23,850 / 23,800 support versus 23,974 / 24,000 resistance.

The day favours range-selling / wait-for-acceptance unless price sustains above 24,000 or breaks below 23,800.

Section Confidence: 68%

2. Key Levels

Level Type | Level | Interpretation | Confidence

---|---:|---|---

Strong Resistance | 24,040 - 24,050 | R2 zone; above this, shorts near 24,000 may begin covering | 73%

Immediate Resistance | 23,974 - 24,000 | R1 + previous-day high proximity + confirmed 24,000 call OI resistance | 76%

Strong Support | 23,791 - 23,800 | S2 + round-number support / simulated put-writer defence | 72%

Immediate Support | 23,849 - 23,858 | S1 + previous-day low zone | 75%

Pivot | 23,916.20 | Intraday mean-reversion magnet | 75%

CPR Zone (TC to BC) | 23,911.68 - 23,920.73 | Very narrow CPR; acceptance outside this zone matters more than the gap | 76%

Previous Day High | 23,983.20 | Upper reference from May 27 | 78%

Previous Day Low | 23,858.25 | Lower reference from May 27 | 78%

Previous Day Close | 23,907.15 | Flat-open anchor | 80%

Breakout Level | 24,000 / 24,040 | 24,000 is psychological + option resistance; 24,040 is R2 confirmation | 72%

Breakdown Level | 23,849 / 23,800 | Below S1 then S2 shifts the tape bearish | 72%

Expected Intraday Range | 23,564 - 24,241 | VIX statistical envelope; not a trade target | 63%

R1 | 23,974.15 | First pivot resistance | 75%

R2 | 24,041.15 | Second pivot resistance | 72%

S1 | 23,849.20 | First pivot support | 75%

S2 | 23,791.25 | Second pivot support | 72%

Levels are calculated from May 27 Nifty OHLC: high 23,983.20, low 23,858.25, close 23,907.15. CPR width is about 9.05 points, which is very narrow. ([indmoney.com])(https://www.indmoney.com/indices/nifty-50?utm_source=openai)

Section Confidence: 74%

3. Probability Model

From current day open of 23,902.15:

Upside Probability: 35%

Downside Probability: 27%

Sideways Probability: 38%

Total: 100%

Section Confidence: 62%

The leading scenario is sideways-to-slightly-constructive, not a clean trend call.

The flat open just below CPR keeps the first decision point around 23,920 / 23,940.

Confirmed derivatives data places meaningful resistance at 24,000, while the 23,850 - 23,800 area is the first serious downside test. ([upstox.com])(<https://upstox.com/news/market-news/trading/trade-setup-for-may-29-can-nifty-50-close-above-24-000-on-friday-check-details/article-194458/>)

Global and crude cues support dips, but persistent FPI selling and USD/INR above 95 keep upside confidence capped. ([upstox.com])(<https://upstox.com/news/market-news/stocks/nifty-50-sensex-asian-markets-fii-activity-crude-oil-gold-prices-key-things-to-know-before-market-opens-on-may-29/article-194454/>)

4. Factor Scoring Table

Factor | Observation | Bias | Weight | Impact | Confidence

---|---|---|---|---|---

Price Action & Gap Context | Open at 23,902.15, about -0.02% versus previous close; open just below very narrow CPR | Neutral to slightly cautious | 35% | Flat-open range unless 23,920 / 23,940 is reclaimed | 70%

India VIX / Volatility | India VIX previous close 14.98; normal regime | Neutral / range-supportive | 20% | Supports controlled moves, but narrow CPR can still trigger expansion | 75%

Derivatives Logic | Confirmed: 24,000 has highest call OI for June 2 weekly expiry; 23,000 has highest put OI. Simulated near-term support: 23,900 / 23,800 | Range with 24,000 cap | 20% | Favours premium decay inside 23,850 - 24,000 | 62%

Global & Macro Cues | US markets at record highs; Asia positive; Brent near \$92; US-Iran deal hopes, not final | Mixed but constructive | 15% | Supports dips but does not remove headline risk | 70%

Institutional Flow / Liquidity | FPI sold ■1,042.70 crore; DII bought ■3,821.00 crore on May 27; FPI May selling remains heavy | Mixed | 10% | DII floor vs FPI overhang | 72%

Markov Regime Overlay | Recent sequence: strong up day on May 25, then down / flat closes on May 26-27 | Calibration layer | Non-voting or bounded | Suggests mean-reversion / consolidation more than persistence | 56%

Recent close sequence used for the Markov overlay: May 25 close 24,031.70, May 26 close 23,913.70, and May 27 close 23,907.15. ([lemonn.co.in](https://lemonn.co.in/blog/market-updates/sensex-nifty-rally-crude-slides/?utm_source=openai))

Section Confidence: 66%

5. Scenario Mapping

Bullish Case (35%)

Price must sustain above: 23,920 first, then 23,974 / 24,000.

VIX behaviour: VIX should remain stable below roughly 15.5; a sharp VIX spike would weaken the bullish case.

Breakout confirmation: 15-minute acceptance above 24,000, followed by holding 23,974 - 24,000 on retest.

Upside targets: 24,040 / 24,050 first; then 24,100 if 24,000 call writers are forced to cover.

Confidence: 59%

Bearish Case (27%)

Price must fail below: 23,849 / 23,858.

VIX behaviour: VIX rising back toward 16+ would confirm downside expansion.

Breakdown confirmation: Sustained trade below 23,800, not just a wick.

Downside targets: 23,791, then 23,700 - 23,650 if news / FPI pressure accelerates.

Confidence: 55%

Sideways Case (38%)

Range to hold: 23,850 - 24,000.

Option writer defence zone: Confirmed 24,000 call resistance; simulated 23,900 / 23,800 put defence; simulated max-pain reference near 23,900.

Confirming behaviour: Failed attempts above 24,000 and quick absorption near 23,850.

Mean reversion target: 23,916 pivot / CPR zone.

Confidence: 63%

Section Confidence: 62%

6. Assumptions Made

Missing Data Assumptions

- Exact 09:20 live option-chain PCR and max pain were not available from a public source; therefore PCR is not used as a confirmed input.

- US 10-year yield is treated qualitatively because the best verified morning source reported that Treasury yields eased, without a precise 09:20 IST numeric print. ([apnews.com](https://apnews.com/article/69f6b6c8b2bf904c69087af415812d4c?utm_source=openai))
- Today's post-open high, low, close, and intraday path are intentionally excluded from this 09:20 view.

Simulated Derivatives Assumptions

- Confirmed: 24,000 call OI is the key resistance for the June 2 weekly expiry, and 23,000 has the highest put OI. ([upstox.com](https://upstox.com/news/market-news/trading/trade-setup-for-may-29-can-nifty-50-close-above-24-000-on-friday-check-detail/article-194458/))
- Simulated: Near-term call-writing zones are 24,000 / 24,100; near-term put-writing zones are 23,900 / 23,800.
- Simulated max-pain reference: 23,900, because it is the round strike closest to the open.

Macro Assumptions

- Brent near \$92 is constructive for India, but the US-Iran agreement was not formally complete at the morning boundary. ([upstox.com](https://upstox.com/news/market-news/stocks/nifty-50-sensex-asian-markets-fii-activity-crude-oil-gold-prices-key-things-to-know-before-market-opens-on-may-29/article-194454/))
- USD/INR opening near 95.55 is still a pressure point for FPI behaviour even though it improved versus recent stress levels. ([republicworld.com](https://www.republicworld.com/business/business-market-rupee-opens-higher-usd-inr-rate-us-iran-peace-deal-crude-oil-prices-2026-05-29-126108?utm_source=openai))
- FPI selling remains a structural overhang, while DII buying is a liquidity floor rather than a standalone bullish trigger. ([business-standard.com](https://www.business-standard.com/markets/capital-market-news/gift-nifty-indicates-flat-start-for-equities-on-dalal-street-126052900220_1.html?utm_source=openai))

Markov/Quant Assumptions

- Markov overlay uses recent close-to-close regime evidence only; no full multi-year transition matrix is applied in this live report.
- Because recent action shifted from a strong up day to down / flat closes, the overlay reduces trend confidence and supports a range-first interpretation.

Section Confidence: 65%

7. Invalidations / Risk Factors

Risk Factor | Trigger | Consequence | Primary View Invalidated | Confidence

---|---|---|---|---

Price invalidation | Sustained break below 23,800 or acceptance above 24,040 | Converts range day into directional expansion | Sideways / range-selling view | 74%

Geopolitical/news risk | US-Iran deal denial, Strait of Hormuz disruption, or crude rebound | Fast repricing in oil-sensitive India risk | Constructive macro cue | 66%

FII selling shock | Heavy post-open FPI-style selling plus weak rupee above 95.80 / 96.00 | DII floor may not hold intraday | Buy-on-dip / upside case | 64%

VIX spike | India VIX reclaims 16+ quickly | Wider candles, stop-loss slippage, poor option-selling conditions | Range-selling comfort | 70%

Watch window | 09:20 - 10:15 opening acceptance; 13:30 - 14:45 gamma / headline window | False breakouts more likely near edges | Early directional conviction | 68%

Section Confidence: 68%

8. Trader-Specific Desk Plan

Option Non-Directional Seller

- Suitable / avoid: Suitable only after 15-30 minutes of acceptance inside 23,850 - 24,000; avoid if price is trending beyond 24,000 or below 23,800.
- Preferred structure: Intraday short strangle / short straddle variant with strict stop-loss; avoid oversized naked exposure.
- Strike or range logic: Prefer short-call side near 24,050 / 24,100 and short-put side near 23,800 / 23,850 only if spot remains inside the desk range.
- Entry condition: Enter only after rejection from 24,000 or support response near 23,850; do not enter during a candle expansion.
- Stop/invalidation: Exit if spot sustains above 24,040 or below 23,800; leg-level SL around 1.5x-2x premium received, adjusted for liquidity.
- Time window: Prefer 09:40 - 13:45; reduce exposure after 14:30 because gamma / headline risk can rise.
- Confidence: 58%

Option Directional Seller

- Suitable / avoid: Suitable on confirmed acceptance only; avoid predicting direction from the flat open alone.
- Preferred side: Sell puts only if price reclaims and holds 23,920 / 23,940; sell calls only if price rejects CPR and breaks 23,849.
- Strike logic: Bullish put-sell logic below 23,850 / 23,800; bearish call-sell logic above 24,000 / 24,050.
- Entry condition: Wait for retest confirmation, not first breakout candle.
- Stop/invalidation: Bullish short puts invalid below 23,849 / 23,800; bearish short calls invalid above 24,000 / 24,040.
- Time window: 09:35 - 12:00 for cleaner directional entries; reassess after lunch.
- Confidence: 56%

Option Buyer

- Suitable / avoid: Avoid inside 23,850 - 24,000 chop unless premium is cheap and the stop is very tight.
- Calls or puts: Calls above sustained 24,000; puts below sustained 23,849 / 23,800.
- Entry condition: Buy only on acceptance beyond levels, ideally with a retest; avoid chasing the first spike.
- Stop/invalidation: Calls invalid below 23,974 after breakout; puts invalid above 23,858 after breakdown.
- Target logic: Calls target 24,040 then 24,100; puts target 23,800 / 23,791 then 23,700.
- Time window: Best window is first 60-90 minutes if breakout is clean; otherwise wait for post-13:30 expansion.
- Confidence: 52%

Future Intraday Trader

- Suitable / avoid: Suitable for level-based futures traders; avoid midpoint trades near 23,900 - 23,920 unless using scalp rules.
- Entry zone: Long only above 23,920 / 23,940 retest; short only below 23,849 retest.
- Stop: Long stop below 23,880 or below 23,849 depending on entry; short stop above 23,895 / 23,920 depending on breakdown quality.
- Targets: Long targets 23,974, 24,000, 24,040; short targets 23,800, 23,791, 23,700.
- Timing: Let the first 5-15 minute post-09:20 acceptance define whether CPR is reclaimed or rejected.
- Confidence: 60%

Section Confidence: 57%

9. Trading Desk Interpretation

Classification: Range-selling day.

Bottom line: Treat 23,850 - 24,000 as the base operating range until price proves otherwise; sustained acceptance above 24,000 / 24,040 converts the day bullish, while a sustained break below 23,800 converts it bearish.

Section Confidence: 61%
