

Nifty 50 Post Market Tally - 2026-06-04

Nifty 50 Evening Tally - 2026-06-04

Run boundary: Post-market after 17:00 IST

Market status: OPEN - tally executed.

1. Actual Post-Market Data Used

Item	Actual
Previous close	23,405.60
Open	23,282.45
High	23,465.30
Low	23,247.30
Close	23,416.55
Day range	218.00 pts
Close vs open	**Above open** by 134.10 pts
Close vs previous close	+10.95 pts / +0.05%
India VIX close	15.89, down 2.41%

Sources used in the original tally: Nifty OHLC from NewsArena India, VIX/macro context from Business Standard, and holiday/status checks from NSE.

2. Trader Audit Table

Item	Predicted	Actual	Deviation / Result	Verdict	Auto-heal action
VIX Risk Envelope	22,924 - 23,641	23,247.30 - 23,465.30	Contained, but very broad	Risk-only pass	Do not score as precision. Keep as volatility boundary only.
Expected Day Range	23,155 - 23,505	23,247.30 - 23,465.30	High edge error 39.70; low edge error 92.30	**Precision miss**	Score edge precision separately from containment; add low-edge miss tag.
Expected High Zone	23,420 - 23,505	23,465.30	Inside zone; zone width 85 pts	Directionally right, too wide	Penalize visible high zones above 60 pts unless confidence is lowered.
Expected Low Zone	23,155 - 23,225	23,247.30	22.30 pts above zone; zone width 70 pts	Tolerance hit, too wide	Penalize wide low zone and keep practical target width near 30-50 pts.
Tail Expansion Zones	23,525 - 23,650 / 23,030 - 23,150	Not needed	Duplicated high/low risk information	Remove from visible report	Keep tail levels internal for invalidation only.
Long Trigger	Above 23,375, SL 23,318, T1 23,445, T2 23,525	Triggered; T1 hit; T2 not hit	T1 RR 1.23; T2 RR 2.63	Mixed	Flag target-1 RR below preferred 1.50 threshold.
Short Trigger	Below 23,215, SL 23,285, T1 23,155, T2 23,075	Not triggered	No short trade	Neutral	No penalty for non-triggered short, but record setup quality.
Close vs Open Direction	Close above open	Close above open	Correct	**Hit**	Keep binary direction scoring.

3. Corrected Section Scores

| Section | Corrected score | Reason |

|---|---:|---|

Header/reference prices	92%	Open and prior references were usable.
VIX risk envelope	60%	It contained the day but was not a tradable precision forecast.
Expected Day Range	52%	Containment passed, but low edge missed the +/-50 target.
Expected High/Low Zones	68%	High was good, low was close, but both zones were too wide.
Close vs open direction	100%	Binary direction was correct.
Opening execution map	62%	Long worked to T1, but T1 RR was weak and T2 failed.
Trader-specific guidance	64%	Useful only after trigger confirmation; non-directional context needed more caution.
Overall corrected tally	**64%**	Better than a miss, but not an 86/100 day.

4. Calibration / Auto-Healing Applied

Bounded calibration was updated with the following failure tags:

- `expected\_day\_range\_precision\_miss`
- `expected\_range\_low\_edge\_miss`
- `expected\_high\_zone\_too\_wide`
- `expected\_low\_zone\_too\_wide`
- `target1\_rr\_below\_preferred`

The morning agent will now receive the calibration file before generating the next report, so these misses influence confidence and range construction. This is bounded auto-healing only: it updates scoring, calibration offsets, report structure, and quality gates; it does not rewrite CPR math, remove risk controls, or chase yesterday's exact result.

5. Desk Conclusion

June 4 should be recorded as a **mixed-quality report**: direction correct, high zone useful, low zone acceptable but imprecise, broad VIX envelope not tradable, and long execution only partially attractive because target-1 reward was too low.
