

Nifty 50 Intraday Desk Report - 2026-05-27 Backtest

Nifty 50 Intraday Desk Report

Analysis Date: 2026-05-27

Mode: BACKTEST

Generated As Of: 2026-05-27 09:20 IST

Reference Prices:

Previous Close: 23,913.70

Today's Open: 23,880.35

Expected Day Range: 23,516 - 24,244

Expected Range Confidence: 58%

Close vs Open Direction:

Expected Bias: Near open with mild downside risk unless 24,000 is reclaimed

Direction Confidence: 55%

Overall Report Confidence: 66%

1. Market Summary

Nifty opened mildly lower by about 0.14%, but the more important signal is that the open is below the full CPR zone and marginally below the previous day low. India VIX at 16.13 is elevated-normal and had cooled the prior day, which argues against panic but still allows 150-250 point intraday swings. Global cues are mixed: US tech strength and Asian support are offset by high crude, weak rupee, and FII selling. The day favours range-selling or conditional breakdown, not blind directional buying.

Section Confidence: 70%

2. Key Levels

| Level Type | Level | Interpretation | Confidence |

|---|---|---|---|

| Strong Resistance | 24,100 - 24,167 | Prior high/R2 zone; short covering only above this band | 82% |

| Immediate Resistance | 23,938 - 24,000 | CPR lower edge to round-number supply | 84% |

| Strong Support | 23,758 - 23,800 | S2 plus market technical support zone | 80% |

| Immediate Support | 23,836 - 23,885 | S1, prior low, and opening support cluster | 85% |

| Pivot | 23,962.98 | Balance point from previous day OHLC | 90% |

| CPR Zone | 23,938.34 - 23,987.63 | Moderate CPR width, open below zone | 90% |

| Previous Day High | 24,089.80 | Resistance / call-writing reference | 88% |

| Previous Day Low | 23,885.45 | Open is slightly below this; reclaim matters | 88% |

| Previous Day Close | 23,913.70 | Carry-forward reference | 90% |

| Breakout Level | 24,040 - 24,050 | Sustained 15-min hold confirms bullish reversal attempt | 76% |

| Breakdown Level | 23,835 - 23,800 | Sustained break confirms bearish continuation | 78% |

| Expected Intraday Range | 23,516 - 24,244 | VIX-derived statistical range, intentionally wide | 58% |

R1	24,040.52	First pivot resistance	90%
R2	24,167.33	Second pivot resistance	90%
S1	23,836.17	First pivot support	90%
S2	23,758.63	Second pivot support	90%

Section Confidence: 86%

3. Probability Model

From current day open of 23,880.35:

Upside Probability: 25%

Downside Probability: 31%

Sideways Probability: 44%

Total: 100%

Section Confidence: 62%

The leading case is sideways/range because the open is weak versus CPR but not a large panic gap. VIX cooling reduces the odds of immediate collapse, while FII selling, USD/INR stress, and crude risk prevent a clean bullish call. A close near the open is more probable than a high-conviction trend unless 24,050 or 23,800 breaks decisively.

4. Factor Scoring Table

| Factor | Observation | Bias | Weight | Impact | Confidence |

|---|---|---|---|---|---|

| Price Action & Gap Context | -0.14% open; below CPR and prior low | Bearish | 35% | Downside skew, but not panic | 74% |

| India VIX / Volatility | VIX close 16.13, down 3.41% previous day | Mixed/Sideways | 20% | Premium supports selling, less panic | 72% |

| Derivatives Logic | Simulated: 24,000/24,100 call supply; 23,800 put defence | Sideways/Mild bearish | 20% | Range with breakdown risk | 56% |

| Global & Macro Cues | US positive, Asia mixed, GIFT weak, crude/rupee risk high | Mixed fragile | 15% | Caps upside | 64% |

| Institutional Flow | FII -2,408 Cr, DII +1,361 Cr | Bearish but cushioned | 10% | FII pressure, DII floor | 78% |

| Markov Regime Overlay | Proxy regime: sideways/mixed from recent returns | Calibration layer | Bounded | Supports range case | 48% |

Section Confidence: 68%

5. Scenario Mapping

Bullish Case (25%)

Price must sustain above: 24,000, then 24,040 - 24,050

VIX behaviour: VIX should stay below 16.5 and ideally cool

Breakout confirmation: 15-min close above R1 with no rejection below 24,000

Upside targets: 24,090 - 24,100 -> 24,160 - 24,170

Confidence: 58%

Bearish Case (31%)

Price must fail below: 23,938/CPR lower edge and remain below 23,885

VIX behaviour: VIX rises above 16.7 while price loses 23,835

Breakdown confirmation: sustained trade below 23,800

Downside targets: 23,758 -> 23,650/23,600

Confidence: 64%

Sideways Case (44%)

Range to hold: 23,800 - 24,050

Option writer defence zone: Calls near 24,000/24,100; puts near 23,800/23,700

Confirming behaviour: repeated rejection at CPR/24,000 and absorption near 23,800

Mean reversion target: 23,913 - 23,963

Confidence: 67%

Section Confidence: 64%

6. Assumptions Made

Missing Data Assumptions:

- Full 9:20 option-chain OI/PCR snapshot was not reconstructed; derivatives view is simulated.
- Formal 20-day Markov transition matrix was not fully reconstructed in this sample; recent regime overlay is treated as a bounded proxy.
- US 10-year yield was not central to the Nifty morning view and is treated as secondary.

Simulated Derivatives Assumptions:

- Call writing zones assumed at 24,000, 24,100, and 24,167.
- Put writing zones assumed at 23,800, 23,758, and 23,700.
- Max pain estimate: 23,900 - 24,000.
- PCR assumption: neutral-to-slightly call-heavy until price reclaims 24,000.

Macro Assumptions:

- Crude near/above USD 100 is treated as India macro risk.
- USD/INR above 95 is treated as severe FII-pressure context under the framework.
- FII selling remains a headwind; DII buying provides a partial floor.

Markov/Quant Assumptions:

- Recent price history is treated as sideways/mixed, not a clean bull or bear persistence regime.
- Markov impact is limited to confidence calibration, not directional override.

Section Confidence: 78%

7. Invalidations / Risk Factors

| Risk Factor | Trigger | Consequence | Primary View Invalidated | Confidence |

|---|---|---|---|---|

| Price invalidation | 15-min hold above 24,050 | Range/bearish view weakens; short covering possible | Sideways/bearish | 76% |

Breakdown acceleration	Sustained below 23,800	Trend-down day risk rises	Sideways	78%
Geopolitical/crude risk	Brent spike / Iran escalation headline	Sudden risk-off and gap-like intraday fall	All non-directional plans	70%
FII selling shock	Heavy selling visible in banks/IT	DII floor may fail	Buy-on-dip attempts	68%
VIX spike	VIX above 17.2 with price below 23,835	Premium expands; avoid naked selling	Option-selling comfort	72%
Watch window	9:20-10:15 IST	First acceptance/rejection around 23,885 and 24,000	Morning bias	82%

Section Confidence: 70%

8. Trader-Specific Desk Plan

Option Non-Directional Seller

- Suitable / avoid: Suitable only after first 30-45 minutes if 23,800 - 24,050 holds.
- Preferred structure: Defined-risk iron condor or short strangle with hedge wings.
- Strike or range logic: Sell outside 23,700 PE and 24,100/24,200 CE only if VIX cools and spot stays contained.
- Entry condition: Price rejects both 24,000 upside and 23,800 downside.
- Stop/invalidation: Exit/adjust if spot closes 15-min outside 23,800 - 24,050.
- Time window: Prefer 10:00-13:45; avoid fresh late-day risk before holiday.
- Confidence: 62%

Option Directional Seller

- Suitable / avoid: Suitable with mild bearish preference if CPR rejection persists.
- Preferred side: Call credit spread above 24,050/24,100 after rejection.
- Strike logic: 24,100 CE short with 24,200/24,250 hedge; avoid naked shorts.
- Entry condition: Spot fails below 23,938 - 24,000 after retest.
- Stop/invalidation: Spot sustains above 24,050.
- Time window: 9:45-12:30 after confirmation.
- Confidence: 60%

Option Buyer

- Suitable / avoid: Avoid blind buying; premiums may decay if range holds.
- Calls or puts: Puts only below 23,800 with VIX uptick; calls only above 24,050.
- Entry condition: Momentum candle plus follow-through, not first tick breakout.
- Stop/invalidation: Re-entry into 23,850 - 24,000 range.
- Target logic: Breakdown target 23,758/23,650; breakout target 24,100/24,167.
- Time window: First 90 minutes or post-13:45 only if momentum returns.
- Confidence: 54%

Future Intraday Trader

- Suitable / avoid: Wait-and-trade; no middle-zone trade.
- Entry zone: Short below 23,835/23,800; long only above 24,050.

- Stop: Short stop above 23,900; long stop below 23,985.
- Targets: Short 23,758 then 23,650; long 24,100 then 24,167.
- Timing: Avoid chase between 23,850 and 24,000.
- Confidence: 58%

Section Confidence: 60%

9. Trading Desk Interpretation

Classification: Range-selling day with conditional breakdown risk.

Option sellers can work only with hedged structures and confirmation that 23,800 - 24,050 is respected. Option buyers need a level break plus VIX confirmation, otherwise theta decay risk is high. Futures traders should wait for acceptance outside the opening range and avoid the noisy middle.

Bottom line: Treat 27 May 2026 morning as a weak-below-CPR open, but not a confirmed crash setup unless 23,800 breaks with VIX expansion.

Section Confidence: 66%

Backtest Integrity: This analysis was generated using only data available as of/before approximately 09:20 IST on 27 May 2026. The actual 27 May 2026 closing price and intraday outcome were not referenced while forming the morning view.
