

Nifty 50 Intraday Desk Report - 2026-06-03

Nifty 50 Intraday Desk Report

Analysis Date: 2026-06-03

Mode: LIVE

Generated At: 2026-06-03 09:20 IST

Reference Prices:

Previous Close: 23483.55

Today's Open: 23415.95

VIX Risk Envelope: 23076 - 23756

VIX Envelope Confidence: 74%

Expected Day Range: 23190 - 23540

Expected Range Confidence: 57%

Expected High Zone: 23465 - 23540

Expected Low Zone: 23190 - 23285

Tail Expansion Zones: Upside 23580 - 23620 / Downside 23095 - 23160

Range Precision Confidence: 54%

Opening Execution Map:

No-Trade / Chop Zone: 23390 - 23455

Long Trigger: Above 23460, SL 23405, targets 23500 / 23540

Short Trigger: Below 23380, SL 23435, targets 23310 / 23240

Execution Confidence: 58%

Close vs Open Direction:

Expected Direction: Close below open

Direction Confidence: 55%

Overall Report Confidence: 58%

1. Market Summary

- NSE is open: 2026-06-03 is not listed as a 2026 NSE trading holiday, and Nifty opened at 23415.95 versus the previous close of 23483.55, a flat-to-mild gap-down inside the calculated CPR band.

([moneycontrol.com])(<https://www.moneycontrol.com/markets/NSEholidays.php>)

- India VIX cooled to 15.36 on 2026-06-02, placing volatility in the normal zone, but the morning setup can still expand if VIX re-prices upward after the open.

([icicidirect.com])(<https://www.icicidirect.com/futures-and-options/news/nifty-june-futures-trade-at-premium/1703562>)

- GIFT Nifty was near-flat by 09:05 IST, but the broader morning tone stayed fragile because FPIs sold ■8,362.92 crore while DIIs bought ■9,589.32 crore on 2026-06-02. ([business-standard.com])(https://www.business-standard.com/markets/capital-market-news/gift-nifty-suggests-flat-opening-for-equities-on-d-street-126060300159_1.html?utm_source=openai)

- Probable behaviour: first acceptance test around 23390 - 23455; below 23380 favours downside continuation, while above 23460 permits only a controlled recovery attempt.

- Day type: wait-and-watch / range-to-breakdown bias, not a blind trend-chasing open.

Section Confidence: 61%

2. Trader Key Levels

Trader Question | Level | Action

---|---:|---

Where to go long? | Above 23460 | Buy/long only after acceptance; SL 23405

Where to go short? | Below 23380 | Sell/short only after acceptance; SL 23435

Where to book longs / avoid fresh longs? | 23465 - 23540 | Upside supply / expected high zone

Where to book shorts / avoid fresh shorts? | 23190 - 23285 | Downside support / expected low zone

Where to avoid trading? | 23390 - 23455 | Chop/no-trade zone

What invalidates the base view? | Above 23580 or below 23160 | Switch to alternate scenario: upside squeeze above 23580, downside tail below 23160

Section Confidence: 59%

3. Probability Model

From current day open of 23415.95:

Upside Probability: 28%

Downside Probability: 38%

Sideways Probability: 34%

Total: 100%

Section Confidence: 56%

The leading scenario is a fragile range-to-downside session. The open is inside the calculated CPR, which normally requires acceptance before directional conviction.

The downside probability leads because of weak institutional foreign flow, rupee/oil pressure, and the risk that the 23380 shelf fails.

The upside case is still alive if price reclaims 23460 - 23500 with VIX cooling, so the close-below-open call is modest-confidence, not aggressive.

The VIX envelope is used only for risk awareness; the tradable Expected Day Range is 23190 - 23540.

4. Factor Scoring Table

Factor | Observation | Bias | Weight | Impact | Confidence

---|---|---|---:|---|---

Price Action & Gap Context | Previous session recovered from the day low and closed higher, but today opened below previous close and inside a moderately wide CPR area.

([5paisa.com])(https://www.5paisa.com/share-market-today/nifty-50?utm_source=openai)) | Mixed but fragile | 35% | Slight bearish unless 23460 sustains | 63%

India VIX / Volatility | India VIX fell 7.17% to 15.36 on 2026-06-02; normal regime, but not low enough to ignore event risk.

([icidirect.com])(https://www.icidirect.com/futures-and-options/news/nifty-june-futures-trade-at-premium/1703562)) | Neutral to range-supportive | 20% | Helps mean reversion unless VIX spikes | 70%

Derivatives Logic | Previous EOD Nifty PCR OI was 1.09, but PCR volume was 0.74; live 09:20 option-chain resistance/support is simulated from round strikes and pivot clusters. ([blinkx.in])(https://blinkx.in/put-call-ratio?utm_source=openai)) | Mixed | 20% | 23500/23600 supply, 23300/23200 support | 54%

Global & Macro Cues | US indices closed at fresh records, while Asian cues were mixed with Nikkei strong and Hang Seng weak; crude was elevated near USD 97/bbl and RBI MPC begins today.

([apnews.com])(https://apnews.com/article/3032a3ae19ec9715fa2b4c9fda85268e?utm_source=openai)) | Mixed but fragile | 15% | Global support offset by oil/RBI risk | 62%

Institutional Flow / Liquidity | FPIs sold ■8,362.92 crore and DIIs bought ■9,589.32 crore on 2026-06-02; DII support offsets but does not erase persistent FPI pressure. ([business-standard.com])(https://www.business-standard.com/markets/capital-market-news/gift-nifty-suggests-flat-opening-for-equities-on-d-street-126060300159_1.html?utm_source=openai)) | Fragile | 10% | Downside risk on failed bounce | 78%

Markov Regime Overlay | Recent daily sequence shows a bounce after multi-session weakness, implying bear-to-sideways persistence rather than clean bullish persistence. | Calibration layer | Non-voting or bounded | Lowers direction confidence | 52%

Section Confidence: 59%

5. Scenario Mapping

Bullish Case (28%)

Price must sustain above: 23460, then 23500

VIX behaviour: VIX should stay near or below the previous close zone; any sharp VIX rise weakens the long case.

Breakout confirmation: 15-minute acceptance above 23500 with failed retest of 23460.

Upside targets: 23540 first, then 23580 - 23620 tail only if 23540 is absorbed.

Confidence: 50%

Bearish Case (38%)

Price must fail below: 23380

VIX behaviour: VIX firming above the prior close zone supports downside expansion.

Breakdown confirmation: Sustained trade below 23310 / 23285 without quick recovery back into 23390 - 23455.

Downside targets: 23240, 23190, then 23160 - 23095 tail if support breaks.

Confidence: 56%

Sideways Case (34%)

Range to hold: 23285 - 23540

Option writer defence zone: Simulated 23300 put defence and 23500/23600 call supply, with prior EOD PCR OI mildly put-heavy at 1.09. ([blinkx.in])(https://blinkx.in/put-call-ratio?utm_source=openai))

Confirming behaviour: Repeated rejection from both 23460+ and 23380- without expansion volume.

Mean reversion target: 23420 - 23455

Confidence: 55%

Section Confidence: 56%

6. Assumptions Made

- Missing Data Assumptions.

- Current-day open is taken as 23415.95 from a public market page; no actual 2026-06-03 high, low, close, or later intraday path is used in this morning view. ([5paisa.com])(<https://www.5paisa.com/share-market-today/nifty-50>))

- Previous trading day OHLC used internally: high 23556.95, low 23229.15, close 23483.55; minor vendor differences may exist. ([5paisa.com])(https://www.5paisa.com/share-market-today/nifty-50?utm_source=openai))

- US 10-year yield was searched but not used as a primary driver because a clean pre-09:20 IST source was not strong enough.

- Simulated Derivatives Assumptions.
- Live 09:20 NSE option-chain strike OI was not treated as confirmed.
- Previous EOD PCR OI of 1.09 is confirmed from public data; strike zones are simulated from prior OHLC, calculated pivots, round numbers, and the 23300/23500/23600 clusters. ([blinkx.in](https://blinkx.in/put-call-ratio?utm_source=openai))
- Max-pain proxy is assumed near the nearest round-number magnet around 23400 - 23500 unless live chain confirms otherwise.
- Macro Assumptions.
- RBI MPC event risk is active because the three-day MPC meeting starts on 2026-06-03. ([business-standard.com](https://www.business-standard.com/amp/markets/news/stock-market-live-june-3-nse-bse-sensex-today-nifty-gift-nifty-us-iran-deal-brent-crude-ipo-today-pfc-stock-delhivery-share-price-126060300110_1.html?utm_source=openai))
- Brent near USD 97/bbl and USD/INR around the 95+ zone are treated as mild-to-material India macro headwinds. ([timesofindia.indiatimes.com](https://timesofindia.indiatimes.com/business/india-business/sensex-stock-market-today-03-june-2026-live-updates-nse-bse-gift-nifty-50-top-gainers-losers-mcx-stocks-in-focus-market-news/liveblog/131474199.cms?utm_source=openai))
- US record highs are supportive globally, but India-specific FPI selling and oil/rupee risk reduce the pass-through. ([apnews.com](https://apnews.com/article/3032a3ae19ec9715fa2b4c9fda85268e?utm_source=openai))
- Markov/Quant Assumptions.
- Recent daily-state overlay is coarse and bounded: it is used only to reduce overconfidence, not to generate the trade by itself.
- CPR, pivot, R1/R2, S1/S2, previous high/low/close, VIX envelope, option zones, expected zones, and tail zones were calculated internally but only trader-relevant decision levels are displayed.

Section Confidence: 60%

7. Invalidations / Risk Factors

Risk Factor | Trigger | Consequence | Primary View Invalidated | Confidence

---|---|---|---|---

Price invalidation | Acceptance above 23580 | Upside squeeze toward 23620 and possible close above open | Cautious downside/range base view | 57%

Geopolitical/news risk | US-Iran / crude headline shock or Brent moving toward 100+ | Wider downside tail, INR pressure, VIX expansion | Sideways case | 55%

FII selling shock | Fresh broad sell pressure with USD/INR above 95.5 area | 23285 may fail; tail toward 23160 - 23095 opens | Expected low zone | 58%

VIX spike | VIX sustains above 16.5 - 17 while price trades below 23380 | Short trades get priority; option sellers reduce exposure | Range-selling plan | 60%

Watch window | First 45 minutes, RBI-related headlines, and post-11:00 trend attempt | False breaks likely; avoid chasing inside 23390 - 23455 | Opening execution map | 62%

Section Confidence: 58%

8. Trader-Specific Desk Plan

Option Non-Directional Seller

- Suitable / avoid: Suitable only after the first 30-45 minutes if price stays between 23380 and 23540; avoid aggressive naked selling during the opening chop.
- Preferred structure: Defined-risk short strangle / iron condor around simulated support-resistance.
- Strike or range logic: Prefer call risk above 23550/23600 and put risk below 23200/23150 only after range confirmation.

- Entry condition: Enter only if spot remains inside 23390 - 23455 or rejects both 23460+ and 23380-.
- Stop/invalidation: Exit or cut the threatened side if spot accepts above 23580 or below 23160; premium stop still subject to slippage.
- Time window: 09:45 - 14:15; avoid fresh entries late if VIX expands.
- Confidence: 54%

Option Directional Seller

- Suitable / avoid: Suitable with triggers; avoid selling directionally inside 23390 - 23455.
- Preferred side: Mild preference for call selling on failed rise near 23465 - 23540; put selling only if price accepts above 23460 and VIX stays soft.
- Strike logic: Failed-rise CE selling around 23550/23600; bullish PE selling only below 23300/23200 after spot holds above 23460.
- Entry condition: CE sell after rejection from expected high zone; PE sell only after sustained reclaim above 23460.
- Stop/invalidation: CE thesis invalid above 23580; PE thesis invalid below 23380.
- Time window: 09:45 - 13:45 preferred.
- Confidence: 55%

Option Buyer

- Suitable / avoid: Suitable only for trigger-based momentum; avoid buying options in the chop zone.
- Calls or puts: Calls above 23460; puts below 23380.
- Entry condition: Buy calls after acceptance above 23460 with target 23500/23540; buy puts below 23380 with target 23310/23240.
- Stop/invalidation: Calls below 23405; puts above 23435 or quick reclaim above 23390.
- Target logic: Book partials at first target; do not wait for tail zones unless price expands with VIX confirmation.
- Time window: 09:30 - 11:30 for best momentum quality; reassess after lunch.
- Confidence: 56%

Future Intraday Trader

- Suitable / avoid: Suitable for disciplined breakout/breakdown traders; avoid scalping mid-CPR chop.
- Entry zone: Long above 23460; short below 23380.
- Stop: Long SL 23405; short SL 23435.
- Targets: Long 23500 / 23540; short 23310 / 23240; tails only above 23580 or below 23160.
- Timing: Let the first acceptance candle complete; avoid first-tick execution.
- Confidence: 58%

Section Confidence: 56%

9. Trading Desk Interpretation

Avoid / wait-and-watch day.

The desk should not pre-commit inside 23390 - 23455; trade only after acceptance above 23460 or below 23380, with a modest base expectation for close below open and strict respect for VIX expansion risk.
