

Nifty 50 Post-Market Tally - 2026-06-02

Nifty 5 PM Post-Market Tally — 2026-06-02

Market status verification

NSE was open. NSE Clearing's June 2026 F&O settlement schedule lists **02-Jun-2026** as a valid trade date with settlement on **03-Jun-2026**, and post-close Nifty 50 market data is available for the session.
(nsearchives.nseindia.com)(<https://nsearchives.nseindia.com/content/circulars/CMPT74072.pdf>)

Actual post-market data used

Item	Actual / Status
Nifty 50 Open	23,229.15
Nifty 50 High	23,556.95
Nifty 50 Low	23,229.15
Nifty 50 Close	23,483.55
Change vs previous close	+100.95 / +0.43%
Close vs open	Above open by +254.40
Actual day range	327.80 points
India VIX close/latest	15.355, down 7.16%
Same-day FII/DII	Not reliably available in accessible post-close sources at tally time; closing articles still cited prior-session flows.

Upstox reported the Nifty 50 at **23,483.55**, with open **23,229.15**, high **23,556.95**, low **23,229.15**, and previous close **23,382.60**. ([upstox.com](https://upstox.com/indices/nifty-50-share-price/))(<https://upstox.com/indices/nifty-50-share-price/>) 5paisa reported India VIX at **15.355**, down **7.16%**, with open/high **16.5425** and low **15.115**; Business Standard separately reported India VIX down about **7.17%** to **15.36**. ([5paisa.com](https://www.5paisa.com/share-market-today/india-vix))(<https://www.5paisa.com/share-market-today/india-vix>)

Market context after close

The session became a **gap-down reversal / short-covering recovery**, not a sell-on-rise day. Market commentary noted that the Nifty opened weak, stayed range-bound in the first half amid monsoon, Middle East and RBI-policy caution, then recovered sharply in the afternoon; the rally was led by IT heavyweights such as TCS, Infosys, HCL Tech and Tech Mahindra. ([tradingview.com](https://www.tradingview.com/news/moneycontrol%3A612692848094b%3A0-taking-stock-sensex-rises-383-points-nifty-tops-23-400-as-it-shares-surge/))(<https://www.tradingview.com/news/moneycontrol%3A612692848094b%3A0-taking-stock-sensex-rises-383-points-nifty-tops-23-400-as-it-shares-surge/>)

Forecast audit summary

Audit Area	Morning Forecast	Actual	Result
Market open verification	Open	Open	Hit
Previous close / open references	23,382.60 / 23,229.15	23,382.60 / 23,229.15	Hit
VIX risk envelope	22,866 - 23,592	Actual 23,229.15 - 23,556.95	Contained
Primary expected day range	23,120 - 23,530	High exceeded by 26.95; low above range floor	Exact containment miss, tolerance pass
Expected high zone	23,470 - 23,530	High 23,556.95	Hit within +50 tolerance; error 26.95

Expected low zone	23,120 - 23,220	Low 23,229.15	**Hit within +50 tolerance; error 9.15**
Close vs open direction	Close below open	Close above open	**Miss**
Leading scenario	Bearish, 46%	Bullish recovery path	**Miss**
Alternate bullish case	Above 23,405 toward 23,480 / 23,530	Triggered and both targets hit	**Hit**
Opening execution map	Avoid chop; long above 23,405; short below 23,190	Short trigger never fired; long trigger fired and hit targets	**Good trigger quality**

Section-wise comparison

1. Market Summary

Score: 45/100.

The report correctly identified the weak gap-down open and the tactical importance of **23,200 - 23,250**, but the headline “sell-on-rise” interpretation was wrong. The low formed at the open, the **23,190 breakdown never triggered**, VIX cooled sharply, and the market recovered into the afternoon.

2. Key Levels

Score: 78/100.

The level framework was useful. Immediate support around **23,200 - 23,250** held, the expected low zone missed by only **9.15 points**, the expected high zone missed by only **26.95 points**, and the high entered the strong-resistance band **23,545 - 23,625** before closing lower. The main weakness was that the bearish narrative did not adapt to the failed breakdown.

3. Probability Model

Score: 35/100.

The largest probability was assigned to downside (**46%**) and the binary direction call was **below open**, but the actual close was **above open** by **254.40 points**. The model did include a **34% bullish case**, but it underweighted the gap-down exhaustion + VIX-cooling reversal.

4. Factor Scoring

Score: 42/100.

Price-action and FII/macro caution were directionally understandable at 09:20, but the bearish VIX interpretation failed because India VIX fell materially by the close. The derivatives view was mixed: resistance near 23,500-23,600 did cap the day's high area, but call-side resistance did not prevent the recovery.

5. Scenario Mapping

Score: 65/100.

The **leading bearish scenario failed** because price never broke **23,190**. The **bullish alternate scenario worked well**: above **23,405**, the report's upside targets **23,480** and **23,530** were reached, with VIX cooling below the bullish-case threshold.

6. Assumptions

Score: 70/100.

The morning report was transparent that final OHLC and final flows were unavailable at 09:20. Same-day FII/DII data remained unreliable in accessible sources at tally time; Moneycontrol's FII/DII page notes that provisional cash data is typically released after market close, while detailed derivatives/OI data comes later.

([moneycontrol.com])(<https://www.moneycontrol.com/markets/fii-dii-data/>)

7. Invalidations / Risk Factors

Score: 75/100.

The report warned that acceptance above **23,550** would invalidate the bearish sell-on-rise view. The actual high was **23,556.95**, so the invalidation zone was tested. However, the available close-only data does not prove sustained 15-minute acceptance above 23,550.

8. Trader-Specific Desk Plan

Score: 70/100.

| Trader Type | Tally |

|---|---|

| Option non-directional seller | Reasonable caution to avoid early selling; later range expansion above 23,470 meant aggressive neutral selling was risky. |

| Option directional seller | Put-selling after failed breakdown was useful; early call-selling bias was vulnerable. |

| Option buyer | Best section: calls above 23,405 hit 23,480 and 23,530 targets; puts below 23,190 were not triggered. |

| Future intraday trader | Trigger map worked: no short below 23,190, long above 23,405 hit targets. |

Final verdict

Forecast quality: Mixed.

The morning report missed the **binary close-vs-open direction** and the **leading bearish scenario**, but the **expected high/low zones were within the ± 50 -point precision tolerance**, the **VIX envelope contained the day**, and the **conditional long trigger performed well**.

Bounded auto-healing action

Processed only bounded calibration actions; **no core skill logic was rewritten**.

- Recorded **direction miss** and **leading bearish scenario miss**.
- Recorded **range precision hit**: both high-zone and low-zone errors were within ± 50 points.
- Recorded **VIX risk envelope hit**.
- Added failure tags for: `direction\_miss`, `leading\_bearish\_scenario\_miss`, `sell\_on\_rise\_classification\_miss`, and `vix\_cooling\_underweighted`.
- Recommended bounded confidence offsets only:
- Price Action & Gap Context: **-1.0 point** for over-weighting bearish continuation when the breakdown had not triggered.
- India VIX / Volatility: **-1.0 point** for under-weighting VIX-cooling reversal risk.
- Derivatives Logic: **-0.5 point** for treating call resistance as directional drag rather than a cap/rejection zone.
- Pattern counter incremented: `gap\_down\_low\_at\_open\_vix\_cool\_reversal`.
