

Nifty 50 Intraday Desk Report - 2026-06-04

Nifty 50 Intraday Desk Report

Analysis Date: 2026-06-04

Mode: LIVE

Generated At: 2026-06-04 09:20 IST

Reference Prices:

Previous Close: 23405.60

Today's Open: 23282.45

VIX Risk Envelope: 22924 - 23641

VIX Envelope Confidence: 71%

Expected Day Range: 23155 - 23505

Expected Range Confidence: 58%

Expected High Zone: 23420 - 23505

Expected Low Zone: 23155 - 23225

Tail Expansion Zones: Upside 23525 - 23650 / Downside 23030 - 23150

Range Precision Confidence: 55%

Opening Execution Map:

No-Trade / Chop Zone: 23220 - 23375

Long Trigger: Above 23375, SL 23318, targets 23445 / 23525

Short Trigger: Below 23215, SL 23285, targets 23155 / 23075

Execution Confidence: 57%

Close vs Open Direction:

Expected Direction: Close above open

Direction Confidence: 54%

Overall Report Confidence: 58%

1. Market Summary

- NSE is verified open for 2026-06-04: Nifty opened at 23,282.45 at 09:15 IST, down 123.15 points from the previous close of 23,405.60. ([business-standard.com](https://www.business-standard.com/amp/markets/news/stock-market-live-june-4-nse-bse-sensex-today-nifty-gift-nifty-us-iran-tension-brent-crude-cmr-green-ipo-126060400076_1.html))

- The open is a moderate gap-down of about -0.53%, placed below the calculated CPR band but still above the prior low / lower support shelf.

- India VIX previous close was 16.28, an elevated-normal volatility setup that allows intraday expansion but also leaves room for VIX-cooling recovery if the opening support shelf holds.

([dhan.co](https://dhan.co/indices/india-vix-share-price/?utm_source=openai))

- Global cues are fragile: US indices fell overnight, Asian markets opened lower, Brent remained high near \$96.89, and USD/INR opened at 95.71. ([apnews.com](https://apnews.com/article/7eaa04d69fe8e7fbd162d9474390dc6))

- Base behaviour favours wait-and-trade triggers: downside pressure exists, but a gap-down exhaustion / short-covering close above open is marginally preferred unless 23,215 breaks.

Section Confidence: 61%

2. Trader Key Levels

Trader Question | Level | Action

---|---:|---

Where to go long? | Above 23375 | Buy/long only after acceptance; SL 23318

Where to go short? | Below 23215 | Sell/short only after acceptance; SL 23285

Where to book longs / avoid fresh longs? | 23420 - 23505 | Upside supply / expected high zone

Where to book shorts / avoid fresh shorts? | 23155 - 23225 | Downside support / expected low zone

Where to avoid trading? | 23220 - 23375 | Chop/no-trade zone

What invalidates the base view? | Below 23150 or above 23530 | Below 23150 switches to trend-bear; above 23530 switches to breakout-bull

Section Confidence: 60%

3. Probability Model

From current day open of 23282.45:

Upside Probability: 39%

Downside Probability: 35%

Sideways Probability: 26%

Total: 100%

Section Confidence: 55%

The leading scenario is a fragile gap-down recovery attempt rather than a clean bullish day.

The open is weak, but it is not a breakdown open below the prior low; the bearish trade still needs acceptance below 23,215.

Heavy FII cash selling and weak global cues cap upside, while DII absorption and opening support keep short-covering risk meaningful. ([sgxnifty.org])(<https://sgxnifty.org/2026/06/03/india-after-market-data-03-jun-2026/>)

The binary desk call is therefore **Close above open**, with only modest confidence.

4. Factor Scoring Table

Factor | Observation | Bias | Weight | Impact | Confidence

---|---|---|---:|---|---

Price Action & Gap Context | Nifty opened at 23,282.45 after a prior close of 23,405.60; previous session OHLC was 23,415.95 / 23,459.65 / 23,151.50 / 23,405.60. ([business-standard.com])(https://www.business-standard.com/amp/markets/news/stock-market-live-june-4-nse-bse-sensex-today-nifty-gift-nifty-us-iran-tension-brent-crude-cmr-green-ipo-126060400076_1.html) | Mixed, slight recovery | 35% | Gap-down pressure, but support not broken | 62%

India VIX / Volatility | India VIX previous close 16.28; VIX risk envelope is wide, but not used as the practical day range. ([dhan.co])(https://dhan.co/indices/india-vix-share-price/?utm_source=openai) | Volatile / mixed | 20% | Supports wider stops and trigger-only entries | 66%

Derivatives Logic | 09:20 strike-wise OI snapshot not confirmed; simulated zones place call supply near 23,500 / 23,600 and put defence near 23,200 / 23,000. Nifty weekly expiry is Tuesday under NSE's revised expiry circular. ([nsearchives.nseindia.com])(<https://nsearchives.nseindia.com/content/circulars/FAOP68747.pdf>) | Range with breakout risk | 20% | Supports no-trade band until acceptance | 49%

Global & Macro Cues | S&P 500 fell 0.7%, Dow 1.2%, Nasdaq 0.9%; Asian markets were lower; Brent traded around \$96.89 and the US 10-year yield rose to about 4.49%.

([apnews.com])(https://apnews.com/article/7eaa04d69fe8e7fbdd162d9474390dc6)) | Bearish | 15% | Caps expected high unless 23,375 reclaims | 70%

Institutional Flow / Liquidity | FII/FPI cash net sell was ■5,616.56 crore; DII cash net buy was ■5,740.89 crore on 03-Jun-2026. ([sgxnifty.org])(https://sgxnifty.org/2026/06/03/india-after-market-data-03-jun-2026/)) | Mixed but fragile | 10% | DII floor offsets, but FII supply remains a sell-on-rise risk | 67%

Markov Regime Overlay | Recent visible closes show a weak / lower-high regime, but the gap-down opened close to support, raising mean-reversion odds. ([5paisa.com])(https://www.5paisa.com/nifty-historical-data)) | Calibration layer | Non-voting or bounded | Lowers directional conviction | 48%

Section Confidence: 62%

5. Scenario Mapping

Bullish Case (39%)

Price must sustain above: 23375

VIX behaviour: Should cool or stay below the previous close zone; a fresh spike weakens the case.

Breakout confirmation: 15-minute acceptance above 23405, then follow-through above 23445.

Upside targets: 23445 / 23525, with tail only toward 23650.

Confidence: 54%

Bearish Case (35%)

Price must fail below: 23215

VIX behaviour: Should rise toward 16.8-17.0 or hold firm while price fails.

Breakdown confirmation: Acceptance below 23150 with weak breadth and failed retest of 23215.

Downside targets: 23155 / 23075, with tail toward 23030.

Confidence: 53%

Sideways Case (26%)

Range to hold: 23220 - 23445

Option writer defence zone: Simulated 23200 put defence and 23500 call supply.

Confirming behaviour: Rejections at both triggers, VIX not expanding, and no sustained move beyond 23375.

Mean reversion target: 23340 - 23375

Confidence: 51%

Section Confidence: 57%

6. Assumptions Made

Missing Data Assumptions

- No clean, source-confirmed 09:20 IST live Nifty option-chain OI snapshot was available from public search; derivative zones are therefore marked as simulated, not confirmed.

- India VIX previous close of 16.28 was used for the VIX envelope; no VIX open/high/low was estimated.

([dhan.co])(https://dhan.co/indices/india-vix-share-price/?utm_source=openai))

- Business Standard's 09:15 open entry and 5paisa previous-session OHLC were used for reference price and calculations. ([business-standard.com])(https://www.business-standard.com/amp/markets/news/stock-market-live-june-4-nse-bse-sensex-today-nifty-gift-nifty-us-iran-tension-brent-crude-cmr-green-ipo-126060400076_1.html))

Simulated Derivatives Assumptions

- Call-writing / supply zones are inferred near 23450, 23500, and 23600.
- Put-writing / support zones are inferred near 23200, 23150, and 23000.
- Inferred max-pain / magnet area is 23300-23400, not a confirmed live max-pain reading.
- Nifty weekly options are treated as Tuesday-expiry contracts; NSE's circular shifted Nifty weekly contracts from Thursday to Tuesday. ([nsearchives.nseindia.com](https://nsearchives.nseindia.com/content/circulars/FAOP68747.pdf))

Macro Assumptions

- Global risk is treated as fragile because US indices fell, Asian markets retreated, Brent stayed elevated, USD/INR opened at 95.71, and RBI policy was pending for Friday. ([apnews.com](https://apnews.com/article/7eaa04d69fe8e7fbdd162d9474390dc6))
- No fresh geopolitical shock after 09:20 IST is assumed inside the base case.

Markov/Quant Assumptions

- Markov overlay is a lightweight regime check from recent visible Nifty daily closes, not a full database transition matrix.
- It is used only to reduce confidence and not to override price triggers.

Section Confidence: 65%

7. Invalidations / Risk Factors

Risk Factor | Trigger | Consequence | Primary View Invalidated | Confidence

---|---|---|---|---

Price invalidation | Sustained trade below 23150 or above 23530 | Below 23150 opens 23075 / 23030; above 23530 opens 23650 | Gap-down recovery / chop base | 62%

Geopolitical/news risk | Fresh US-Iran / West Asia escalation or crude spike toward \$98-\$100 | Wider range, faster downside tails, option IV expansion | Expected Day Range | 65%

FII selling shock | Large sell-program continuation after open, especially if 23215 fails | DII floor may not hold; bear case becomes primary | Close above open | 60%

VIX spike | India VIX moves decisively above 17.0-17.25 | Short-covering thesis weakens; SL discipline becomes critical | Long-trigger confidence | 58%

Watch window | 09:20-10:15 acceptance, 12:30-13:30 macro headlines, 14:15-15:15 dealer adjustment | Whipsaw risk and false breakouts | Intraday execution map | 57%

Section Confidence: 60%

8. Trader-Specific Desk Plan

Option Non-Directional Seller

- Suitable / avoid: Suitable only after range acceptance; avoid immediate 09:20 entry while gap-down discovery is active.
- Preferred structure: Intraday short strangle / iron condor only with hard level-based exits; avoid unmanaged naked shorts.
- Strike or range logic: Prefer outside 23100 PE and 23600 CE if price stays inside 23220-23445; tighten only after VIX cools.
- Entry condition: Enter after 10:00 only if price rejects both 23215 downside and 23375 upside.
- Stop/invalidation: Exit the threatened side if spot accepts below 23215 or above 23375; full exit if 23150 or 23530 breaks.

- Time window: 10:00-13:45; avoid fresh selling near late-day news or sharp VIX expansion.
- Confidence: 52%

Option Directional Seller

- Suitable / avoid: Suitable only after trigger confirmation; avoid selling premium directly into the opening gap.
- Preferred side: Mildly prefer put-selling only after 23375 acceptance; switch to call-selling if 23215 breaks.
- Strike logic: Above 23375, consider 23100/23200 PE sell with SL; below 23215, consider 23500/23600 CE sell with SL.
- Entry condition: 5-15 minute acceptance beyond trigger, not a one-tick breakout.
- Stop/invalidation: Stop if spot re-enters the chop zone and holds; slippage and gap risk remain even with SL.
- Time window: 09:45-14:15, avoid late chase after target one is hit.
- Confidence: 54%

Option Buyer

- Suitable / avoid: Suitable for trigger trades; avoid buying inside 23220-23375 chop.
- Calls or puts: Calls above 23375; puts below 23215.
- Entry condition: Calls after reclaim-and-hold above 23375; puts after breakdown-and-hold below 23215.
- Stop/invalidation: Calls below 23318; puts above 23285.
- Target logic: Calls 23445 / 23525; puts 23155 / 23075.
- Time window: 09:30-11:15 for first move, then only on clean post-lunch retest.
- Confidence: 56%

Future Intraday Trader

- Suitable / avoid: Suitable for disciplined breakout/retest traders; avoid scalping mid-zone.
- Entry zone: Long above 23375; short below 23215.
- Stop: Long SL 23318; short SL 23285.
- Targets: Long 23445 / 23525; short 23155 / 23075.
- Timing: Wait for opening range acceptance; no forced trade between 23220 and 23375.
- Confidence: 58%

Section Confidence: 56%

9. Trading Desk Interpretation

Classification: **Avoid / wait-and-watch day.**

Bottom line: The desk expects a fragile gap-down exhaustion attempt and a **Close above open**, but execution must be trigger-based—long only above 23,375 and short only below 23,215; inside that band, do not force trades.

Section Confidence: 55%
